Racing Blue

FEATURES

VVA
VARIABLE VALVE ACTUATION

This is the first ever high-performance VVA system that provides torque for ease of use even at low rpm. There are two intake valve cam: one for low to mid-range rpm and another for high rpm. They switch between each other at the 2400 rpm mark to ensure good power and torque is present throughout the entire rev range.

ASC
ASSIST &
SLIPPER CLUTCH

An AS (assist and slipper) clutch is adopted to reduce the weight of the clutch pedal and provide low stress shifting during deceleration. The ASC helps to reduce fatigue for the rider. This also prevents excessive engine braking, thus reducing its effects on chassis behavior. The AS clutch makes for smooth, enjoyable downshifts.
